

WORLD-CLASS RISK MANAGEMENT SOFTWARE
FOR THE PUBLIC SECTOR, BY PUBLIC SECTOR EXPERTS

EXIGIS RiskWorksPS® is the only multi-application cloud-based Risk Management Operating System® developed specifically for the public sector to provide risk pools and independent self-insureds a central ‘command-and-control’ platform to easily identify, process, monitor, and manage discreet risk and insurance data across the operation.

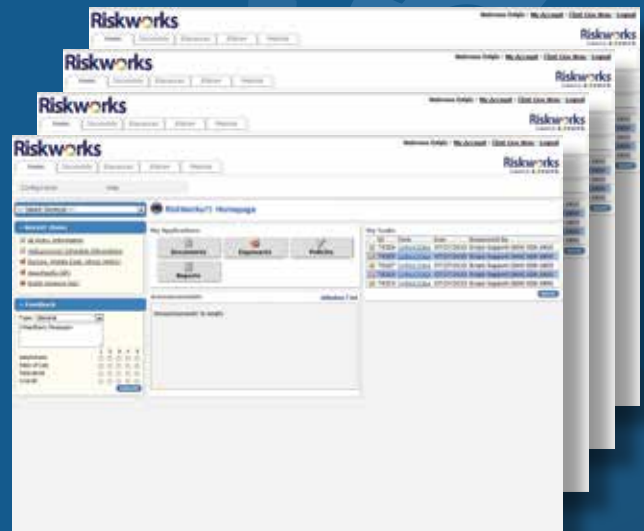

SOLUTION OVERVIEW

RiskWorksPS centralizes the administration and automates the execution of the most burdensome, paper-laden, and time-consuming risk management and insurance activities:

- ❖ Exposure data management and the validation of insurance values
- ❖ Insurance policy renewals and administration
- ❖ Document and knowledge management
- ❖ Process reporting and analytics

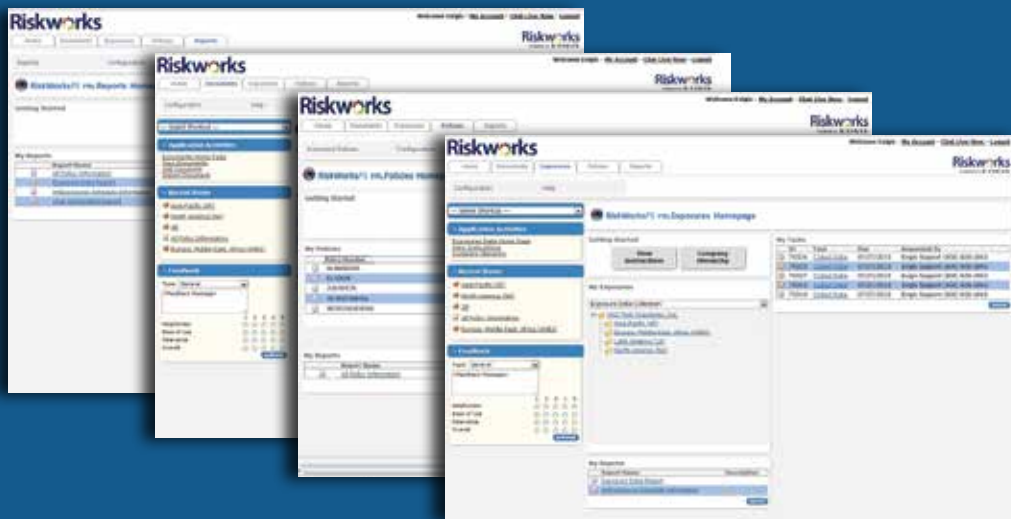

A Public Sector Solution. RiskWorksPS was developed and refined in consultation with leading subject matter experts and the nation's largest public sector insurance broker to provide public entities a singular platform to streamline the processing of risk and insurance data - *from identification and assessment, to management and transfer.*

- ❖ **100% web-enabled** solution - no hardware or software requirements
- ❖ Industry leading reliability - **SSAE 16 compliant**
- ❖ Intuitive user defined **application dashboards**
- automated task notifications, alerts, and reminders
- ❖ Standardized suite of **4** software application modules
- scalable to any project regardless of size or scope
- ❖ Over **40** templated Exposure Schedules and Special Risk Questionnaires
- ❖ **25** available Coverage Line and Insurance Policy templates
- ❖ On-demand analytics and reports - access **standard and ad-hoc reports**

Unparalleled in Scope and Flexibility. No more paper forms, manual inputs, incomplete data, or redundant transcription. RiskWorksPS comes equipped with a suite of standard application modules; each adaptable to the specific project needs of your organization:

- ◆ **rm.Exposures®** is a data management and validation application to automate the delegation, task assignment, notification, submission, review and analysis, and reporting of exposure data, underwriting information, and insurance values.
- ◆ **rm.Policies®** is a workflow driven insurance management application enabling the assignment and tracking of renewal tasks and storage of insurance policies and related documents such as proposals, binders, and endorsements.
- ◆ **rm.Documents®** is a knowledge management application providing a flexible toolset for posting, publishing, editing, distributing, and tracking documents, FAQs, and user-generated content.
- ◆ **rm.Reports®** is an integrated ad-hoc reports and analytics application providing users real-time access to system-wide risk and insurance data and process information.

Speed † . Start-to-finish implementation of RiskWorksPS in as few as **four weeks** with the total three year project cost for standard deployments fixed at **\$ 2,500 per month**.
